

Palliative & End of Life Care Navigator Program

Using a navigator, patients and their families will be able to access health and community resources to better support and care for them.

This program is designed to ensure the best care possible for the patient and their family, to improve the patient's quality of life, and to relieve any pain and suffering while aligning with the patient's values and care preferences.

Nicole Luft, Navigator, Palliative & End of Life Care Navigation Program

Palliative & End of Life Care Navigator Program

This program is an extension of the **Chronic Disease Management Program** and exists for patients with life-limiting conditions, and their families and caregivers.

Anyone can refer/self-refer into this program by talking to your family doctor, your healthcare provider team, or contacting the Camrose Primary Care Network at (780) 608-4927 ext. 2000.

You'll meet with a navigator who will help you:

- Access local community supports and services
- Develop and manage your care plan
- Understand your options

Your family doctor and healthcare provider team will be kept up-to-date on any supports and services that you access. As a team, you will work with your family doctor, healthcare provider team, and navigator to ensure your care plan is what is best for you.
